

## The finalists in NRG Battle have been found

**The host nation's Danish team, Team Energinet.dk, is still among the three teams to compete in the final on Friday.**

After the semifinal today, the team from Dutch Gasunie had to leave the IGRC conference in Copenhagen with disappointed hopes. Their task in NRG Battle 2014 consisted of finding the solution to the green transition in the future gas system. According to Team Gasunie, the answer was to have hydrogen instead of gas in the pipes; however, the jury did not find that good enough for the final tomorrow.

The finalists, who compete for a trip around the world to disseminate their innovative ideas, are thus Danish Team Energinet.dk, French Team GDF Suez and German Team DNV GL.

The finalists' ideas range from self-healing gas pipes over more acceptable methods of extracting shale gas to the gas system acting as transporter of several types of renewable energies. The team with the best idea will be revealed on Friday.

Rune Gjermundbo from the Danish Team Energinet.dk
