

## We have seen the future – and it is us!

At the last day of IGRC2014, several delegates summed up and looked forward when the session 'Important messages from the world of gas technology' rounded of the three-day conference.

Biogas, local CHP and power to gas are among the messages and trends.

From the stage, David Caroll, Vice President of the International Gas Union, said:  
- We have seen the future – and it is us.

Also Jack Lewnard, Vice President of Chesapeake Utility, USA, argued that the future of gas is bright – and not just a buffer for other fuels.

But the gas world needs to move forward and focus on new, young researchers and scientist.

David Caroll also pointed out that the gas world needs a clear vision and he referred to the host country Denmark. Denmark has an ambitious goal of being fossil free in 2050. The gas market also needs ambitious goals.

Alexander Medvedev, Vice President of Gazprom, gave the speech when the delegates held a dinner at restaurant Langelinie Pavillon in Copenhagen.

- I see myself as representative for the entire world, he said and announced that we will run for president of International Gas Union, IGU.
