Welcome to Copenhagen

The International Gas Union and Danish Gas Technology Centre cordially invite you to the next International Gas Union Research Conference (IGRC) that will take place in Copenhagen – the capital of Denmark – on September 17-19, 2014.

Organised by Danish Gas Technology Centre

IGRC2014 will act as a technology forerunner for the IGU World Gas Conference - WGC2015 - that will take place in Paris, June 1-5, 2015, see www.wgc2015.org. IGRC2014 is organised by Danish Gas Technology Centre acting on behalf of the Danish Gas Association, the IGU Charter member from Denmark. The conference technical programme is developed by the IGU Programme Committee F for Research, Development and Innovation (IGU PGC F).

Registration and call for papers

Registration opens November 1, 2013. Exhibitor registration is already open, see www.igrc2014.com. Call for papers will be issued November 1, 2013 and deadline for abstracts is January 1, 2014.

The venue is Tivoli Congress Center

IGRC2014 will be held in the state-of-the-art Tivoli Congress Center, www.tivolicongresscenter.com, located in the heart of Copenhagen. Take this opportunity to enjoy wonderful Copenhagen in late summer together with your accompanying person. In addition to the technical programme for delegates, we will also create an inspiring programme dedicated to accompanying persons.

Who will attend?

Conference delegates will be gas technology executives, gas engineers and researchers as well as market professionals who understand that innovation and technology are essential for the future gas industry business model. Delegates will come from the global energy industry, research organisations, academia, government, international organisations, etc. A total conference attendance of 750-1,000 from Europe and overseas is expected.

Global IGRC2014 sponsor support

IGRC2014 is supported by an impressive group of national and international sponsors. Want to join our group of sponsors? Find the Sponsor Prospectus on www.igrc2014.com.

Focus on natural gas in a low carbon future

The focus of the programme and the exhibition will be on all important aspects of the role of natural gas, other energy gases and the gas infrastructure in a future low carbon energy system. IGRC2014 will feature an exhibition as well as an "Innovation and Student Forum".

IGU committee meetings in connection with IGRC2014

We encourage IGU Working Committees, Programme Committees and Task Forces to arrange one of their meetings during the 2012-2015 triennium in Copenhagen in connection with the IGRC2014 conference. The IGRC2014 team offers their assistance with the practical arrangements.

Dedicated IGRC2014 ambassadors

More than 50 gas professionals from all over the world act as IGRC2014-ambassadors volunteering to help the planning and marketing of the conference. We are most grateful for this support which comes as one of the many benefits associated with being a member of the "IGU Family".
